## CLAIMS

1. A device control processing apparatus comprising:

a storage unit that stores a content-device-

5 correspondence table storing correspondence data between content identification information and content-providing devices;

an input unit that inputs content identification information; and

data processing means for specifying a controlled device from the content-device-correspondence table based on the content identification information input from the input unit and for generating and outputting control information corresponding to the specified controlled device.

- 2. The device control processing apparatus according to Claim 1, wherein the device control processing apparatus is connected to a remote controller for remotely operating the controlled device, and the data processing means is configured to output remote-controller control data to the remote controller.
- 3. The device control processing apparatus according to Claim 1, wherein the content-device-correspondence table is configured to store content-providing device information

corresponding to content and channel information or content storage location information indicating content location, and

the data processing means is configured to acquire a controlled device and channel information or content storage location information indicating content location from the content-device-correspondence table based on the content identification information input from the input unit, and is configured to generate and output control information necessary for providing the content corresponding to the acquired channel information or content storage location information.

A display processing apparatus for performing a
 content information displaying process, the display processing apparatus comprising:

5

display data generating means for performing a process for configuring content cards recording content information according to the number of content items, displaying a card group including a plurality of content cards corresponding to the number of content items as a card group that indicates only the presence of content with the content information being hidden, and

displaying a content item selected by a user-operable selection indicator in a portion adjacent to the card group

with the content information being displayed.

- 5. The display processing apparatus according to Claim 4, wherein the display data generating means is configured to perform a process for determining the manner in which each of the content cards is displayed depending on the relative position of the selection indicator in the card group.
- 6. The display processing apparatus according to Claim 4,
  wherein the display data generating means is configured to
  determine the manner in which each of the content cards is
  displayed depending on the relative position of the
  selection indicator in the card group, and

is configured to perform a display process in which a content card at a position close to the selection indicator is set to an angle at which the content information is displayed and a content card at a position far from the selection indicator is set to an angle at which the content information is hidden.

5

7. The display processing apparatus according to Claim 4, wherein the display data generating means is configured to perform a process for moving the content cards along a parametric curve and displaying a content item selected by the selection indicator at a position on the parametric

curve apart from the card group with the content information being displayed.

- 8. The display processing apparatus according to Claim 4,
  5 wherein the display data generating means is configured to
  perform a process for classifying and displaying the content
  cards by genre.
- The display processing apparatus according to Claim 4,
   wherein each of the content cards is configured to record content-providing device and location information as code data.
- 10. The display processing apparatus according to Claim 9,
  - 11. The display processing apparatus according to Claim 9, wherein the location information is URL (Uniform Resource Locators) serving as content location information suitable for acquiring content.
    - 12. A device control processing method comprising:

20

- a content identification information inputting step of inputting content identification information; and
- a data processing step of determining a controlled

device from a content-device-correspondence table storing correspondence data between content identification information and content-providing devices based on the input content identification information, and generating and outputting control information corresponding to the determined controlled device.

13. The device control processing method according to Claim 12, wherein the data processing step generates and outputs remote-controller control data.

5

10

15

20

25

14. The device control processing method according to Claim 12, wherein the content-device-correspondence table is configured to store content-providing device information corresponding to content and channel information or content storage location information indicating content location, and

the data processing step acquires a controlled device and channel information or content storage location information indicating content location from the content-device-correspondence table based on the content identification information input from the input unit, and generates and outputs control information necessary for providing the content corresponding to the acquired channel information or content storage location information.

- 15. A display processing method for performing a content information displaying process, the display processing method comprising:
- a step of configuring content cards recording content information according to the number of content items and displaying a card group including a plurality of content cards corresponding to the number of content items as a card group that indicates only the presence of content with the content information being hidden; and
  - a step of displaying a content item selected by a useroperable selection indicator in a portion adjacent to the card group with the content information being displayed.
- 16. The display processing method according to Claim 15, further comprising a step of performing a process for determining the manner in which each of the content cards is displayed depending on the relative position of the selection indicator in the card group.

20

25

5

10

17. The display processing method according to Claim 15, wherein the display processing method comprises a step of determining the manner in which each of the content cards is displayed depending on the relative position of the selection indicator in the card group, and performs a

display process in which a content card at a position close to the selection indicator is set to an angle at which the content information is displayed and a content card at a position far from the selection indicator is set to an angle at which the content information is hidden.

5

10

- 18. The display processing method according to Claim 15, wherein the display processing method performs a process for moving the content cards along a parametric curve and displaying a content item selected by the selection indicator at a position on the parametric curve apart from the card group with the content information being displayed.
- 19. The display processing method according to Claim 15,15 further comprising a step of performing a process for classifying and displaying the content cards by genre.
  - 20. A computer program for performing a process for generating device control processing data, the computer program comprising:
  - a content identification information inputting step of inputting content identification information; and
- a data processing step of determining a controlled device from a content-device-correspondence table storing correspondence data between content identification

information and content-providing devices based on the input content identification information, and generating and outputting control information corresponding to the determined controlled device.

- 21. A computer program for performing a content information displaying process, the computer program comprising:
- a step of configuring content cards recording content
  information according to the number of content items and
  displaying a card group including a plurality of content
  cards corresponding to the number of content items as a card
  group that indicates only the presence of content with the
  content information being hidden; and
- a step of displaying a content item selected by a useroperable selection indicator in a portion adjacent to the card group with the content information being displayed.
